Education

Northwestern University, Evanston, IL — June 2022
Bachelor of Science in Electrical Engineering cum laude | Minor in Material Science

Northwestern University, Evanston, IL — June 2022
Master of Science in Electrical Engineering | BS/MS Program
- Sodium-Doped Titania Self-Rectifying Memristors for Crossbar Array Neuromorphic Architectures (2021)
- Linear and Symmetric Li-Based Composite Memristors for Efficient Supervised Learning (2022)

Select Coursework: Applied EM and Photonics, Fund. of Signals & Systems, Electronic System Design

Professional Experience

Intel — Hillsboro, OR
Signal Integrity Engineer — June 2021 - December 2022, July 2022-Present
- Measured high-speed channels (PCIe, Ethernet, DRR) using various test equipment to evaluate signal integrity performance on a system level including PCB and package layout
- Performed passive RF probing of suspect channels (PCB and on-package) leveraging advanced calibration and de-embedding methods
- Developed python automation for lab measurement instruments (VNA, oscilloscope, BERT) and post-processing of collected data in both time and frequency domain
- Created signal integrity methodology for optimizing transceiver equalization in the lab leading to significant time savings compared to previous brute force approaches
- Designed tool around Ansys HFSS's Python API to automatically generate PCB and package via layouts for simulation analysis and optimization
- Adapted machine learning workflows for signal integrity needs to generate behavioral transmitter models from HSPICE silicon netlists using MATLAB

Project Experience

Northwestern University — Evanston, IL
Student Researcher — October 2018- June 2022
- Created custom hardware measurement setup to characterize high impedance electronics using pattern generators, digital multimeters, and low noise amplifiers in coordination with Sandia National Labs
- Designed python GUI to automate collection of IV and CV behavior of electronic devices using lab instruments
- Modeled performance of fabricated memristor arrays on machine learning benchmarks

NUSolar — Evanston, IL
Software Lead — December 2018- June 2021
- Programmed and setup CAN communication between multiple custom components using C/C++
- Lead and taught programming workshops to new and perspective members about GIT, Python, CAN, and various commonly used technologies
- Fabricated custom surface mounted Arduino shield PCBs to interface with 24V CAN bus

Skills

Programming	MATLAB, Python (Scikit-RF, matplotlib, numpy, pytorch), C/C++,Typescript, Javascript, GIT
Electronics	Cadence Virtuoso, PathWave ADS, Ansys AEDT (HFSS), HSPICE, Verilog-A, EAGLE, HSPICE
Laboratory	Oscilloscope, TDR, VNA, Pattern Generators, BERT (error detectors)
